## EVALUATION OF HIGH CRASH LOCATIONS (DARK CRITERIA) STUDY

LOCATION \#10:<br>SR 92 (Naamans Road)<br>MILEPOST 0 to 1.29

November 2012
Prepared for:
Delaware Department of
Transportation
$\mathrm{By}:$
Urban Engineers, Inc.

## EXECUTIVE SUMMARY

The purpose of this study was to evaluate locations with the highest ratios of crashes occurring during dark conditions throughout the state of Delaware. The study included reviewing crash history and existing conditions of the locations, identifying specific sites where crashes are occurring and providing recommendations to improve conditions.

The Hazard Elimination Program (HEP) site selection process was used to determine ten (10) locations statewide with a dark crashes Critical Ratio greater than one and ten (10) or more crashes occurring in the three year study period within a one-mile roadway segment. SR 92 (Naamans Road), from Milepost 0 to 1.29, was determined to be one of the ten locations with the highest dark crashes Critical Ratios statewide.

Police crash reports covering three years were analyzed to identify high crash sites along SR 92 (Naamans Road), from Milepost 0 to 1.29. Crash clusters were identified at the following five (5) locations:

- Site \#1: SR 92 @ US 202 (Concord Pike) Intersection (M.P. 0)
- Site \#2: SR 92 @ Stratford Apartments Entrance/Brandywine Town Center Entrances Intersection (M.P. 0.26)
- Site \#3: SR 92 @ Shipley Road Intersection (M.P. 0.52)
- Site \#4: SR 92 @ Grubb Road Intersection (M.P. 0.89)
- Site \#5: SR 92 @ Ebright Road Intersection (M.P. 1.07)

The analysis of the five (5) sites concluded the following: Sites \#1, \#2, \#3 and \#4 have existing partial intersection lighting. Additional new luminaires would be required to bring the light levels up to meet DeIDOT lighting criteria. Photometric calculations are recommended to evaluate the existing lighting at each of these sites.

Due to the high number of rear end crashes at Sites \#2 and \#3, it is recommended that the signal timings and signal coordination along SR 92 be evaluated at these sites.

Two maintenance-related improvements were recommended. At Site \#2, the sign that was knocked down in the median adjacent to the SR 92 Westbound approach left turn lanes stop bar should be replaced. At Site \#4, the transformer base cover should be replaced for DeIDOT pole \#1702 on the southeast corner of the intersection.

Upon analysis of the crash history, Site \#5 did not have a high enough night-to-day crash ratio to warrant closer evaluation for potential nighttime safety improvements.

## 1. INTRODUCTION

The purpose of this study was to evaluate locations with the highest ratios of crashes occurring during dark conditions throughout the state of Delaware. The study included reviewing crash history and existing conditions of the locations, identifying specific sites where crashes are occurring and providing recommendations to improve conditions.

The study included three parts:

Part 1: Location Selection - The Hazard Elimination Program (HEP) site selection process was used to determine ten (10) locations statewide with a dark crashes Critical Ratio greater than one and ten (10) or more crashes occurring in the three year study period within a one-mile roadway segment. Results from the location selection process were reviewed in coordination with DeIDOT. Corridors that were already part of an ongoing HSIP or HEP project were not included in this study. The Critical Ratio methodology was used in the location selection process. The list of statewide 1.0 mile corridors ranked by Critical Ratio is included in Appendix D.

Part 2: Evaluation - After the list of the top ten locations was approved by DeIDOT, an initial review was performed for each selected location. The evaluation included field visits to the sites; collecting information on existing roadway and traffic conditions; crash analysis; preliminary lighting evaluation; and this report. The report includes existing lighting analysis; concept lighting improvement alternatives; other signing, striping and signal recommendations in accordance with the Delaware Strategic Highway Safety Plan (SHSP), particularly related to dark crashes; potential design/implementation issues, and identification of the need for more detailed studies (Phase II studies).

Part 3: Coordination - When possible, DeIDOT-approved recommendations are coordinated for inclusion into the construction of ongoing DeIDOT projects (HEP, Pavement \& Rehabilitation, $P D$, etc.).

The location selection process resulted in a list of ten locations, including SR 92 (Naamans Road) from milepost 0 to 1.29 in Wilmington, Delaware.

## SR 92 (Naamans Road)

The evaluation and recommendations for SR 92 (Naamans Road), from milepost 0 to 1.29, are included in this report. The studied portion of SR 92 is a 1.29-mile stretch of principal arterial roadway in suburban Wilmington, Delaware.

A study area map is provided in Figure 1.

## 2. CRASH DATA SUMMARY

This evaluation was based on crash data during the three year period from May 16, 2008 to May 16, 2011.

A total of 170 crashes occurred on SR 92 (Naamans Road) from milepost 0 to 1.29 during the evaluation period.

There were no fatalities in the study area. Thirty-nine (39) of the crashes resulted in personal injuries.

Of the 170 crashes, 112 of the crashes occurred during daylight ( $66 \%$ ). Forty (40) of the crashes occurred during dark-but lighted conditions (24\%), 12 of the crashes occurred during dark conditions ( $7 \%$ ), 4 of the crashes occurred during either dawn or dusk conditions (2\%) and 2 of the crashes occurred in unknown conditions (1\%).

The highest number of crashes (42) at a single site occurred at the intersection of SR 92 and Shipley Road.

Crashes were grouped together into sites based on their location along SR 92.

## Site \#1: SR 92 @ US 202 (Concord Pike) Intersection (M.P. 0)

There were 40 total crashes at the site during the evaluation period. Fifteen (15) of the crashes (38\%) occurred during dark hours. This site has existing partial roadway lighting.

This site was selected for evaluation based on the crash history and the presence of partial roadway lighting.

Site \#2: SR 92 @ Stratford Apartments Entrance/Brandywine Town Center Entrances Intersection (M.P. 0.26)

There were 31 total crashes at this site during the evaluation period. Twelve (12) of the crashes $(39 \%)$ occurred during dark hours. This site has existing partial roadway lighting.

This site was selected for evaluation based on the crash history and the presence of partial roadway lighting.

## Site \#3: SR 92 @ Shipley Road Intersection (M.P. 0.52)

There were 42 total crashes at the site during the evaluation period. Eleven (11) of the crashes $(26 \%)$ occurred during dark hours. This site has existing partial roadway lighting.

This site was selected for evaluation based on the presence of partial roadway lighting.

There were 20 total crashes at the site during the evaluation period. Six (6) of the crashes (30\%) occurred during dark hours. This site has existing roadway lighting.

This site was selected for evaluation based on the presence of partial roadway lighting.
Site \#5: SR 92 @ Ebright Road Intersection (M.P. 1.07)
There were 20 total crashes at this site during the evaluation period. Four (4) of the crashes (20\%) occurred during dark hours. This site has existing roadway lighting.

This site was not selected for evaluation based on the crash history.

## 3. ROADWAY AND SITE CHARACTERISTICS

SR 92 (Naamans Road) is a four-lane, divided, principal arterial roadway in the study area. Shoulders are present in both directions. The posted speed limit for SR 92 is 40 miles per hour west of Shipley Road and 45 miles per hour east of Shipley Road. There are five signalized intersections in the study area.

In 2010, SR 92 experienced Average Daily Traffic (ADT) of 27,965 vehicles in the study area.

## Site \#1: SR 92 @ US 202 (Concord Pike) Intersection (M.P. 0)

SR 92 and US 202 meet at a large, signalized intersection. The US 202 northbound and southbound approaches both include two left turn lanes, three through lanes and one channelized right turn lane. The SR 92 eastbound and westbound approaches both include two left turn lanes, two through lanes and one channelized right turn lane.

There are no pedestrian crosswalks at the intersection.

Photo 1: SR 92 and US 202 Intersection

Red light-running cameras are present at this intersection.

There are two (2) existing 250 Watt, High Pressure Sodium (HPS) Mongoose style luminaires at the intersection. The luminaires are on utility poles on the southeast and northeast corners.

Site \#2: SR 92 @ Stratford Apartments Entrance/Brandywine Town Center Entrances Intersection (M.P. 0.26)

The main entrance to Brandywine Town Center includes two driveways. The west most driveway serves Southbound right turns and Eastbound left turns. The east most driveway served Southbound left turns and Westbound right turns. The SR 92 Eastbound approach includes two left turn lanes, two through lanes, and one right turn lane. The SR 92 Westbound approach includes two through lanes, and one right turn lane. The northbound approach is the access to the Stratford Apartments, it includes one left turn lane and a channelized right turn.

Pedestrian crosswalks are present on the west side of the east most driveway and the south side of the intersection.

Photo 2: SR 92 and Stratford Apartments Entrance / Brandywine Town Center Entrance Intersection

During a May 2012 field visit, the stub of a traffic sign post was observed in the median adjacent to the SR 92 Westbound approach left turn lanes stop bar. The sign post stub is shown on Photo 3.

Photo 3: Sign Post Stub at Westbound Left Turn Lane at SR 92 and Stratford Apartments Entrance / Brandywine Town Center Entrance Intersection

There is one utility pole-mounted 250 Watt, HPS cobrahead luminaire present on the south side of the intersection. Both Brandywine Town Center driveways include site lighting luminaires approximately 70 feet north of SR 92.

Site \#3: SR 92 @ Shipley Road / Brandywine Town Center Entrance Intersection (M.P. 0.52)
The eastbound and westbound SR 92 approaches both include one left turn lane, two through lanes and one channelized right turn lane. The southbound Brandywine Town Center approach includes two left turn lanes, and one channelized right turn lane. The northbound Shipley Road approach includes two left turn lanes, and one channelized right turn lane.

A diagonal pedestrian crosswalk is present from the northwest island to the southeast island. Pedestrian crosswalks are also present on the south and north sides of the intersection.

Photo 4: SR 92 and Shipley Road / Brandywine Town Center Entrance Intersection
Red light-running cameras are present at this intersection.

There are several existing 250 Watt, HPS roadway luminaires at and approaching the intersection, including one on each corner of the intersection, except for the southwest corner. All of the existing roadway luminaires are mounted on utility poles. The Brandywine Town Center driveway includes site lighting luminaires approximately 40 feet north of SR 92.

## Site \#4: SR 92 @ Grubb Road Intersection (M.P. 0.89)

Grubb Road meets SR 92 from the south at this signalized T-intersection. The eastbound SR 92 approach includes two through lanes and one right turn lane. The westbound SR 92 approach includes one left turn lane, and two through lanes. The northbound Grubb Road approach includes one left turn lane, and one channelized right turn lane. Medians are present on both SR 92 approaches.

Pedestrian crosswalks are present on south and east sides of the intersection.

Photo 5: SR 92 and Grubb Road Intersection
There are four (4) existing 250 Watt, HPS cobrahead luminaires at the intersection. The existing luminaires are on DeIDOT aluminum light poles. There is no luminaire on the southwest corner of the intersection.

During a May 2012 field visit, the transformer base cover for DelDOT pole \#1702 on the southeast corner of the intersection was observed to be missing as shown on Photo 6.

Photo 6: Pole \#1702 Transformer Base Cover Missing

## 4. LIGHTING WARRANT EVALUATION

The DeIDOT Lighting Guidelines contain the conditions for determining if lighting is warranted at a given site. A warrant analysis is included below for each site that was chosen for evaluation.

Section 2.3, Lighting Warrants, of the DeIDOT Lighting Guidelines states that lighting should be installed at "locations where crash patterns indicate that lighting may reduce crashes and where the percentage of nighttime accidents is 40 percent or greater." Section 2.3 also states that lighting may be installed at "locations where crash patterns indicate that lighting may reduce crashes and where the percentage of nighttime accidents is 35 percent or greater."

## Site \#1: SR 92 @ US 202 (Concord Pike) Intersection (M.P. 0)

## Crash Patterns

The Crash Data Summary and Evaluation showed that there were 40 total crashes near this intersection during the three year evaluation period. Fifteen (15) of these crashes occurred during dark conditions.

The manner of impact of the fifteen (15) dark crashes was as follows:

- 7 Rear end (4 NB, $2 \mathrm{WB}, 1 \mathrm{~EB}$ )
- 6 Angle (2 NB/SB LT, 1 NB RT/SB LT, 1 NB LT/SB, 1 NB/WB LT, 1 NB LT/EB/WB LT)
- 2 Ran off the road (EB, NB RT)

## Percentage of Nighttime Crashes

Thirty-eight percent (15 out of 40) of the crashes at the site were during dark conditions according to the crash reports.

## Lighting Warrant Results

Because the intersection has existing lighting at the intersection, the crash history is skewed compared to an unlit intersection. Therefore, the crash history cannot be relied upon in this circumstance for use in lighting warrant analysis.

Site \#2: SR 92 @ Stratford Apartments Entrance/Brandywine Town Center Entrances Intersection (M.P. 0.26)

## Crash Patterns

The Crash Data Summary and Evaluation showed that there were 31 total crashes near this intersection during the three year evaluation period. Twelve (12) of these crashes occurred during dark conditions.

The manner of impact of the twelve (12) dark crashes was as follows:

- 11 Rear end (9 EB, 2 WB)
- 1 Sideswipe (WB)

## Percentage of Nighttime Crashes

Thirty-nine percent (12 out of 31) of the crashes that occurred at the site were during dark conditions according to the crash reports.

## Lighting Warrant Results

Because the intersection has existing lighting at the intersection, the crash history is skewed compared to an unlit intersection. Therefore, the crash history cannot be relied upon in this circumstance for use in lighting warrant analysis.

## Site \#3: SR 92 @ Shipley Road Intersection (M.P. 0.52)

## Crash Patterns

The Crash Data Summary and Evaluation showed that there were 42 total crashes near this intersection during the three year evaluation period. Eleven (11) of these crashes occurred during dark conditions.

The manner of impact of the eleven (11) dark crashes was as follows:

- 8 Rear end (3 EB, $3 \mathrm{WB}, 1 \mathrm{NB}, 1$ SB RT)
- 2 Angle (EB/WB LT)
- Sideswipe

## Percentage of Nighttime Crashes

Twenty-six percent (11 out of 42) of the crashes that occurred at the site were during dark conditions.

## Lighting Warrant Results

Because the intersection has existing lighting at the intersection, the crash history is skewed compared to an unlit intersection. Therefore, the crash history cannot be relied upon in this circumstance for use in lighting warrant analysis.

Site \#4: SR 92 @ Grubb Road Intersection (M.P. 0.89)
Crash Patterns

The Crash Data Summary and Evaluation showed that there were twenty (20) total crashes near this intersection during the three year evaluation period. Six (6) of these crashes occurred during dark conditions.

The manner of impact of the six (6) dark crashes was as follows:

- 4 Rear end (EB)
- 2 Angle (EB/WB LT)

Percentage of Nighttime Crashes

Thirty percent (6 out of 20) of the crashes that occurred at the site were during dark conditions.
Lighting Warrant Results
Because the intersection has existing lighting at the intersection, the crash history is skewed compared to an unlit intersection. Therefore, the crash history cannot be relied upon in this circumstance for use in lighting warrant analysis.

## 5. RECOMMENDATIONS

Recommendations are included below, and recommended improvements are summarized in the following table.

## Site \#1: SR 92 @ US 202 (Concord Pike) Intersection (M.P. 0)

## Roadway Lighting

Due to the high percentage of crashes during dark conditions, photometric calculations would be beneficial to evaluate the existing lighting. The lighting levels would benefit from providing luminaires on the west side of the intersection. The intersection should be evaluated for complex intersection lighting as per Section 4.3.2 of the DeIDOT Lighting Design Guidelines. Complex intersection lighting typically includes two (2) lights on the approaches to the intersection, and one (1) luminaire after the intersection.

## Ongoing Projects

Improvements to this signal, including a box span signal design, were recommended as part of the 2011 HEP. HEP recommendations also included evaluating lighting on the northwest and southwest corners of the intersection.

## Site \#2: SR 92 @ Stratford Apartments Entrance/Brandywine Town Center Entrances Intersection (M.P. 0.26)

## Roadway Lighting

Due to the high percentage of crashes during dark conditions, photometric calculations would be beneficial to evaluate the existing lighting. Currently there is only one luminaire at the intersection. Due to the close proximity of the two Brandywine Town Center entrance driveways (less than 150') the lighting calculation zone should encompass SR 92 between the driveways.

## Signal Timings / Signal Coordination

Twenty-three (23) of the total 31 crashes at this site were rear end crashes. Of the rear end crashes, 11 involved westbound vehicles, 10 involved eastbound vehicles and two (2) involved southbound vehicles. Due to the high proportion of rear end crashes involving SR 92 traffic, it is recommended that signal clearance intervals at the intersection and signal coordination along SR 92 be evaluated. At the time of this report, signal timings are being modified by DeIDOT Traffic in coordination with DelDOT's Transportation Management Center.

## Ongoing Projects

In addition to the ongoing signal timing improvements, other signal improvements are expected at this intersection. These improvements were 2011 HEP recommendations.

## Maintenance

The sign that was knocked down in the median adjacent to the SR 92 Westbound approach left turn lanes stop bar should be replaced.

Site \#3: SR 92 @ Shipley Road Intersection (M.P. 0.52)

## Roadway Lighting

Because the intersection features luminaires that appear to only cover part of the intersection, photometric calculations would be beneficial to evaluate the existing lighting. Specifically, there are existing luminaires surrounding the intersection on all corners, except on the southwest corner. The photometric calculations should evaluate how adding a luminaire on the southwest corner would impact the lighting levels. A new utility pole-mounted luminaire may be feasible on the southwest corner.

## Signal Timings / Signal Coordination

Thirty-four (34) of the total 42 crashes at this site were rear end crashes. Of the rear end crashes, 19 involved westbound vehicles, 8 involved eastbound vehicles, six (6) involved northbound vehicles, and one (1) involved southbound vehicles. Due to the high proportion of rear end crashes involving SR 92 traffic, it is recommended that signal clearance intervals at the intersection and signal coordination along SR 92 be evaluated. The presence of red light running cameras at the intersection may also be contributing to the amount of rear end crashes at the intersection.

## Ongoing Projects

Signal head backplates will be installed at this intersection in fiscal year 2013. The backplates were recommended from the 2011 HEP.

Site \#4: SR 92 @ Grubb Road Intersection (M.P. 0.89)

## Roadway Lighting

Because the intersection features luminaires that appear to only cover part of the intersection, photometric calculations would be beneficial to evaluate the existing lighting. Specifically, there are existing luminaires surrounding the intersection on all corners, except on the southwest corner. The photometric calculations should evaluate how adding a luminaire on the southwest
corner would impact the lighting levels. A new utility pole-mounted luminaire may be feasible on the southwest corner.

## Ongoing Projects

Signal head backplates will be installed at this intersection in fiscal year 2013. The backplates were recommended from the 2011 HEP.

## Maintenance

The transformer base cover should be replaced for DeIDOT pole \#1702 on the southeast corner of the intersection.

## Recommended Improvements

Inj - Injury
AL - Alcohol Involved
LC - Lighting Condition
WC - Weather Condition
SC - Surface Condition
MHE - Most Harmful Event
PC - Primary Contributing Circumstance
Class-Report Classification
MOI - Manner of Impact

## APPENDIX B: Crash Diagrams

Site \#1: SR 92 @ US 202 (Concord Pike) Intersection (M.P. 0)
Site \#2: SR 92 @ Stratford Apartments Entrance/Brandywine Town Center Entrances Intersection (M.P. 0.26)
Site \#3: SR 92 @ Shipley Road Intersection (M.P. 0.52)
Site \#4: SR 92 @ Grubb Road Intersection (M.P. 0.89)

## APPENDIX C: Previous Study

2004 HSIP - Site M Report

## INTRODUCTION

Site M is a 1.49-mile corridor located north of Wilmington along SR 92/Naamans Road (N17) from U.S. 202/Concord Pike to 0.01-mile east of Brandywood Drive. Naamans Road is a four-lane, divided, closedsection roadway with shoulders. The posted speed limit is 45 miles per hour east of Shipley Road and 40 miles per hour west of Shipley Road. The ADT is approximately 27,100 . Within the limits of the site, there are the following signalized and unsignalized intersections:

## Signalized

- U.S. 202/Concord Pike
- Brandywine Town Center (English-Tee)
- Shipley Road
- Grubb Road
- Ebright Road

## Unsignalized

- Brandywood Drive
- Channin Drive
- Dartmouth Woods Road
- Cinder Road
- Ross Road
- Talley Place
- Perry Place

## ACCIDENT DATA SUMMARIES

A total of 107 accidents was reported during the three-year study period between January 2000 and December 2002 including 62 (58 percent) rear end accidents and 34 (32 percent) angle accidents. At the SR 92/Naamans Road and Grubb Road intersection several eastbound drivers complained that sun glare restricted their view of the traffic signal. The following is a summary of the accidents by location and type:

- Shipley Road - 26 accidents
o 8 westbound rear end accidents
o 6 eastbound rear end accidents
o 2 westbound/southbound angle accidents
o 2 southbound right-turn rear end accidents
o 1 eastbound/southbound angle accident
o 1 eastbound/northbound angle accident
- Grubb Road - 20 accidents
o 6 eastbound/northbound angle accidents ( 4 caused by sun glare)
o 5 eastbound rear end accidents
o 4 westbound rear end accidents
o 3 westbound left-turn accidents
- U.S. 202 (east leg) - 19 accidents
o 9 westbound rear end accidents
o 4 eastbound rear end accidents
- Brandywine Town Center - 14 accidents

05 eastbound rear end accidents
o 2 westbound rear end accidents
o 3 westbound/southbound angle accidents
o 2 eastbound left-turn accidents

- Ebright Road - 13 accidents
o 5 westbound rear end accidents
o 2 eastbound rear end accidents
o 2 eastbound sideswipe accidents
o 1 eastbound left-turn accident
- Perry Place - 3 accidents
- Dartmouth Woods Road - 2 accidents
- Brandywood Drive - 2 accidents

A categorical summary of the accidents by type, severity, surface condition, lighting condition, year, and primary cause is shown in Table 1.

## FIELD OBSERVATIONS

- Street lighting is provided on Naamans Road east of Grubb Road, at Shipley Road, and west of Shipley Road.

## Naamans Road/Shipley Road

- This intersection operates with protected left-turn phasing on the eastbound and westbound approaches. Northbound and southbound Shipley Road/Brandywine Shopping Center operate concurrently with turning movements restricted to left-turns and right-turns only.
- The eastbound and the westbound approaches include a left-turn lane, two thru lanes and a right-turn lane. The northbound and southbound approaches include two left-turn lanes and a channelized rightturn lane. The eastbound left-turn into the Brandywine Shopping Center is prohibited, but u-turns are permitted. A "No Left-turn" sign is mounted in conjunction with a "U-turn Lane" sign and a directional route marker for "U.S. 202" on the eastbound approach.
- There is a two-stage signalized pedestrian crossing diagonally spanning the intersection as well as a signalized pedestrian crossing on the north and south legs. Activated by pushbuttons, the pedestrian
"WALK" indications only allow enough time to get to the center island where pedestrians must wait for the next northbound/southbound green cycle to complete the crossing.
- During the PM peak, the eastbound platoons consistently arrived on the red signal indication.
- While all sight distance criteria are met, the eastbound sight distance is slightly restricted by a horizontal curve.
- There is a bus stop located on the nearside of the intersection on the westbound Naamans Road.

## Naamans Road/Grubb Road

- This three-legged intersection includes two thru lanes and a right-turn lane on the eastbound approach and two thru lanes and a left-turn lane on the westbound approach. The northbound approach has a left-turn lane and a channelized right turn lane. This intersection operates with protected/permissive left-turn phasing (lag left) on the westbound approach.
- Pedestrian cross walks are located on the south and the east legs of the intersection
- Street lighting is located on the southeast corner and the north side of the intersection.
- Brandywine Hunt, a single-family home subdivision (up to 102 luxury homes), is planned between Grubb Road and Shipley Road along the northern side of Naamans Road.
- During both peak hours, northbound left-turning vehicles reach a maximum queue of six cars. During the PM peak, heavy eastbound/westbound traffic makes it difficult for northbound right-turning vehicles to make their turn on red.
- Signal detectors seem to be working well and the eastbound/westbound queues consistently clear the intersection during the clearance interval. Platoons generally arrive on the green signal indication.

## Naamans Road/U.S. 202

- The westbound Naamans Road approach to U.S. 202 includes two left-turn lanes, two thru lanes, and a right-turn lane. All four approaches to the intersection operate with protected left-turn phasing.

## Naamans Road/Brandywine Shopping Center

- The western entrances into the Brandywine Shopping Center operate as an "English Tee" intersection with the west most driveway serving southbound right-turns and eastbound left-turns while the eastern driveway prohibits eastbound left-turns from entering the shopping center. The eastern intersection also serves the Stratford Apartments on the south leg. The two intersections operate simultaneously with protected eastbound left-turns at the west most driveway and concurrent northbound and southbound left-turns at the eastern intersection. Westbound left-turns into the Stratford Apartments are prohibited.
- There is a two-stage signalized pedestrian crossing diagonally spanning the eastern intersection as well as a signalized pedestrian crossing on the north and south legs. While pushbuttons are provided, the
pedestrian "WALK" indications operate with the northbound and southbound left-turn phase each cycle.
- No advanced signal warnings are provided on eastbound or westbound Naamans Road as drivers approach this intersection.

## Naamans Road/Ebright Road

- This intersection is located on a vertical crest. The eastbound approach to this intersection includes two left-turn lanes and two thru lanes. The westbound approach includes a U-turn lane, two thru lanes and a right-turn lane. The eastbound and westbound approaches operate with a protected left-turn phase.
- During the PM peak high eastbound left-turning volumes were observed.

## REMEDIAL IMPROVEMENTS

- Install a pedestal mounted signal indication within the concrete island located on the southeast corner of the intersection for eastbound Naamans Road at Grubb Road.

## ADDITIONAL STUDIES

The HSIP committee recommends no additional studies.

TOTAL COST OF REMEDIAL IMPROVEMENTS - \$10,000

# 2004 Highway Safety Improvement Program - SITE M 

N17 (SR 92/Naamans Road) - MP 0.00-1.49 From US 202/Concord Pike to 0.01 miles east of Brandywood Drive
