## EVALUATION OF HIGH CRASH LOCATIONS (DARK CRITERIA) STUDY

LOCATION \#6:<br>Old Baltimore Pike<br>MILEPOST 2.10 to 4.29<br>November 2012

Prepared for:
Delaware Department of
Transportation

By:
Urban Engineers, Inc.

## EXECUTIVE SUMMARY

The purpose of this study was to evaluate locations with the highest ratios of crashes occurring during dark conditions throughout the state of Delaware. The study included reviewing crash history and existing conditions of the locations, identifying specific sites where crashes are occurring and providing recommendations to improve conditions.

The Hazard Elimination Program (HEP) site selection process was used to determine ten (10) locations statewide with a dark crashes Critical Ratio greater than one and ten (10) or more crashes occurring in the three year study period within a one-mile roadway segment. Old Baltimore Pike, from Milepost 2.10 to 4.29 , was determined to be one of the ten locations with the highest dark crashes Critical Ratios statewide.

Police crash reports covering three years were analyzed to identify high crash sites along Old Baltimore Pike, from Milepost 2.10 to 4.29. Crash clusters were identified at the following six (6) sites:

- Site \#1: Old Baltimore Pike @ Godwin Drive / Winterview Way Intersection (M.P. 2.3)
- Site \#2: Old Baltimore Pike @ College Drive Intersection (SR 896) (M.P. 2.45)
- Site \#3: Old Baltimore Pike @ Old Coochs Bridge Road Intersection (M.P. 2.95)
- Site \#4: Old Baltimore Pike @ Chapel St/Sunset Lake Rd (SR 72) Intersection (M.P. 3.3)
- Site \#5: Old Baltimore Pike @ Westover Woods Drive Intersection (M.P. 3.8)
- Site \#6: Old Baltimore Pike @ Albe Drive / Woodland Run Drive Intersection (M.P. 4.2)

Upon analysis of the crash history, Site \#1 did not show a pattern of crashes that would benefit from lighting the intersection.

Site \#2 has existing lighting at the intersection. There are eleven (11) 400 Watt HPS luminaires at the intersection. It is recommended that photometric calculations be performed to determine if the lighting meets DeIDOT criteria. A leaning Yield sign was recommended to be reposted at this intersection.

Site \#3 was not selected for closer evaluation due to the recent installation of roadway lighting at the intersection.

Partial intersection lighting is present at Site \#4. Additional new luminaires would be required to bring the light levels up to meet DeIDOT lighting criteria. Photometric calculations are recommended to evaluate the existing lighting at this site. It is recommended that the intersection be evaluated for complex lighting as defined by the DeIDOT Lighting Design Guidelines.

There were three (3) crashes total at Site \#5 during the three years of evaluated crash data. The crash history did not show a pattern of crashes that would benefit from lighting.

Upon analysis of the crash history, Site \#6 did not have a high enough night-to-day crash ratio to warrant closer evaluation for potential nighttime safety improvements.

## 1. INTRODUCTION

The purpose of this study was to evaluate locations with the highest ratios of crashes occurring during dark conditions throughout the state of Delaware. The study included reviewing crash history and existing conditions of the locations, identifying specific sites where crashes are occurring and providing recommendations to improve conditions.

The study included three parts:

Part 1: Location Selection - The Hazard Elimination Program (HEP) site selection process was used to determine ten (10) locations statewide with a dark crashes Critical Ratio greater than one and ten (10) or more crashes occurring in the three year study period within a one-mile roadway segment. Results from the location selection process were reviewed in coordination with DeIDOT. Corridors that were already part of an ongoing HSIP or HEP project were not included in this study. The Critical Ratio methodology was used in the location selection process. The list of statewide 1.0 mile corridors ranked by Critical Ratio is included in Appendix D.

Part 2: Evaluation - After the list of the top ten locations was approved by DeIDOT, an initial review was performed for each selected location. The evaluation included field visits to the sites; collecting information on existing roadway and traffic conditions; crash analysis; preliminary lighting evaluation; and this report. The report includes existing lighting analysis; concept lighting improvement alternatives; other signing, striping and signal recommendations in accordance with the Delaware Strategic Highway Safety Plan (SHSP), particularly related to dark crashes; potential design/implementation issues, and identification of the need for more detailed studies (Phase II studies).

Part 3: Coordination - Coordination of implementation with ongoing DeIDOT projects (HEP, Pavement \& Rehabilitation, PD, etc.). When possible, DeIDOT-approved recommendations are coordinated for inclusion into the construction of ongoing projects.

The location selection process resulted in a list of ten locations, including Old Baltimore Pike from milepost 2.10 to 4.29 in Newark, Delaware.

## Old Baltimore Pike

The evaluation and recommendations for Old Baltimore Pike, from milepost 2.10 to 4.29, are included in this report. The studied portion of Old Baltimore Pike is a 2.19-mile stretch of minor arterial roadway in suburban Newark, Delaware.

A study area map is provided in Figure 1.

## 2. CRASH DATA SUMMARY

This evaluation was based on crash data during the three year period from December 16, 2007 to December 16, 2010.

A total of 166 crashes occurred on Old Baltimore Pike from milepost 2.10 to 4.29 during the evaluation period.

One crash with a fatality occurred in the study area. The crash involved a pedestrian attempting to cross Old Baltimore Pike at Winterview Way. The crash occurred during dark conditions.

Of the 166 crashes, one hundred six (106) of the crashes occurred during daylight (64\%). Sixty (60) of the crashes occurred during dark conditions (36\%).

The highest number of crashes (59) at an individual site occurred at the intersection of Old Baltimore Pike and Chapel Street/Sunset Lake Road (SR 72).

Crashes were grouped together into sites based on their location along Old Baltimore Pike.

## Site \#1: Old Baltimore Pike @ Godwin Drive / Winterview Way Intersection (M.P. 2.3)

There were seven (7) total crashes at the site during the evaluation period. Three (3) of the seven (7) crashes (43\%) occurred during dark hours.

One of the dark crashes at this site resulted in a fatality. The crash involved a 73 year old male pedestrian crossing Old Baltimore Pike from north to south, approximately 140' east of the intersection. The crash occurred at $8: 12 \mathrm{pm}$ on a Saturday evening. The pedestrian was not crossing Old Baltimore Pike at a crosswalk. The vehicle involved in the crash was driven by 68 year old male driver.

This site was selected for evaluation based on the crash history.

## Site \#2: Old Baltimore Pike @ College Drive (SR 896) (M.P. 2.45)

There were 30 total crashes at this site during the evaluation period. Eleven (11) of the 30 crashes (37\%) occurred during dark hours. This site has existing roadway lighting.

This site was selected for evaluation based on the crash history.

## Site \#3: Old Baltimore Pike @ Old Coochs Bridge Road Intersection (M.P. 2.95)

There were 19 total crashes at the site during the evaluation period. Six (6) of the 19 crashes (32\%) occurred during dark hours. Recently, roadway lighting has been installed at this site.

This site was not selected for evaluation based on the crash history and the recent installation of roadway lighting.

Site \#4: Old Baltimore Pike @ Chapel Street/Sunset Lake Road (SR 72) Intersection (M.P. 3.3)
There were 59 total crashes at the site during the evaluation period. Twenty-three (23) of the 59 crashes (39\%) occurred during dark hours. This site includes partial roadway lighting.

This site was selected for evaluation based on the crash history.

Site \#5: Old Baltimore Pike @ Westover Woods Drive (M.P. 3.8)
There were three (3) total crashes at this site during the evaluation period. Two (2) of the three (3) crashes (67\%) occurred during dark hours.

This site was selected for evaluation based on the crash history.
Site \#6: Old Baltimore Pike @ Albe Drive/Woodland Run Drive (M.P. 4.2)
There were ten (10) total crashes at this site during the evaluation period. Two (2) of the ten (10) crashes (20\%) occurred during dark hours.

This site was not selected for evaluation based on the crash history.

## 3. ROADWAY AND SITE CHARACTERISTICS

Old Baltimore Pike is a two-lane minor arterial roadway to the west of SR 72, and widens to three lanes, including a two-way center left turn lane from SR 72 extending past the eastern bounds of the study area. Shoulders are present in both directions throughout most of the study area.

In 2010, Old Baltimore Pike experienced Average Daily Traffic (ADT) of 13,373 vehicles towards the west side of the study area and 15,763 vehicles on the east side of the study area.

The posted speed limit for Old Baltimore Pike is 35 miles per hour west of SR 72. The speed limit is 45 miles per hour east of SR 72.

There are four signalized intersections and one railroad crossing in the study area.

## Site \#1: Old Baltimore Pike @ Godwin Drive / Winterview Way Intersection (M.P. 2.3)

This site includes two T-intersections separated by 100 feet. Godwin Drive intersects Old Baltimore Pike from the south. One hundred feet (100') to the east of Godwin Drive, Winterview Way intersects Old Baltimore Pike from the north.

Godwin Drive and Winterview Way are both two-lane entrances for residential neighborhoods. Sixty-foot (60') right turn lanes are present on Old Baltimore Pike for both Godwin Drive and Winterview Way. There are no sidewalks or crosswalks at either of the intersections.

There are two existing 70 Watt, High Pressure Sodium (HPS) post top luminaires at the Winterview Way entrance.

There is a Korean church located on the northeast corner of the Winterview Way and Old Baltimore Pike intersection.

## Site \#2: Old Baltimore Pike @ College Drive (SR 896) (M.P. 2.45)

College Avenue (SR 896) intersects Old Baltimore Pike at a large, skewed intersection.
Old Baltimore Pike includes channelized right turns in both directions. There are double left turn lanes on the eastbound approach, along with one through/right turn lane. The westbound approach includes one left turn lane, one shared thru/left turn lane and one right turn pocket.

The College Avenue northbound and southbound approaches include one left turn lane, two through lanes and one yield-controlled right turn lane. Both yield markings are located 100' beyond the stop bar, at the physical edge of Old Baltimore Pike. Based on photo records, it appears the yield markings were added between April 2010 and June 2011. It was noted at the time of the field visit that the southbound approach Yield sign is leaning away from the roadway.

Photo 1: Old Baltimore Pike and College Avenue (SR 896) Intersection
There are eleven (11) existing aluminum light poles at the intersection. Each light pole includes a 400 Watt, HPS cobrahead luminaire.

Photo 2: Facing south on SR 896 towards intersection with Old Baltimore Pike

Old Baltimore Pike's eastbound approach includes one left turn lane, one through lane and one channelized right turn lane. The westbound approach includes two left turn lanes, one through lane and one channelized right turn lane. The northbound SR 72 approach includes one left turn, two through lanes and one channelized right turn. The southbound SR 72 approach includes two left turns, one through lane, and one shared through/right lane.

Photo 3: Facing West on Old Baltimore Pike just east of the SR 72 Intersection
All four approaches have concrete medians. All four approaches also have concrete right-turn channelizing islands.

There is one (1) existing 250 Watt HPS cobrahead luminaire on the southeast corner of the intersection. This luminaire is mounted to a utility pole.

Photo 4: Old Baltimore Pike and SR 72 Intersection
There is a crosswalk on the west side of the intersection across Old Baltimore Pike.
There is a railroad crossing 450 ' to the west of SR 72.

Photo 5: Unlit north side of Old Baltimore Pike and SR 72 Intersection

There is a Royal Farms gas station on the northeast corner of the intersection. Word of Life Christian Center is located on the southeast corner of the intersection. Royal Farms and Word of Life both have entrances 450' east of SR 72.

For eastbound traffic, the following signs are present between SR 72 and the gas station/church entrances, "Share the Road", "Right Lane Ends", "Watch For Entering Traffic", and "Lane Ends Merge Left" signs.

Westbound traffic has a "Share the Road" sign approaching the gas station/church entrances.
At the time of this report, a separate HEP project at this site was recently submitted to DeIDOT Project Development. The HEP project included signing modifications at the intersection.

Photo 6: Single luminaire on southeast corner of Old Baltimore Pike and SR 72 Intersection

## Site \#5: Old Baltimore Pike @ Westover Woods Drive (M.P. 3.8)

Westover Woods Drive and Torington Way intersect Old Baltimore Pike at the entrance into two residential neighborhoods. The intersection is signalized.

The eastbound approach includes one left turn lane, one through lane and one right turn lane/bicycle lane. The westbound approach includes one left turn lane, one through lane, and one right turn lane/bicycle lane. Both the northbound and southbound approaches include one shared through/left turn lane and one right turn lane.

A bike lane exists on both eastbound and westbound Old Baltimore Pike at the intersection. At the intersection, the bike lane is shared with right turning vehicles.

There are crosswalks on all sides of the intersection, except the east side.
There are HPS post top luminaires on pedestrian scale poles at all four corners of the intersection.

## 4. LIGHTING WARRANT EVALUATION

The DeIDOT Lighting Guidelines contain the conditions for determining if lighting is warranted at a given site. A warrant analysis is included below for each site that was chosen for evaluation.

Section 2.3, Lighting Warrants, of the DeIDOT Lighting Guidelines states that lighting should be installed at "locations where crash patterns indicate that lighting may reduce crashes and where the percentage of nighttime accidents is 40 percent or greater." Section 2.3 also states that lighting may be installed at "locations where crash patterns indicate that lighting may reduce crashes and where the percentage of nighttime accidents is 35 percent or greater."

Site \#1: Old Baltimore Pike @ Godwin Drive / Winterview Way Intersection (M.P. 2.3)

## Crash Patterns

The Crash Data Summary and Evaluation showed that there were 7 total crashes near this intersection during the three year evaluation period. Three (3) of these crashes occurred during dark conditions.

The manner of impact of the three (3) dark crashes was as follows:

- 1 Pedestrian-Vehicle collision (Fatal)
- 73 year old male pedestrian crossing Old Baltimore Pike from north to south, approximately 140' east of the intersection, not at a crosswalk, at 8:12 pm on a Saturday evening. Struck by 68 year old male driver.
- 1 Run off the road, westbound
- 1 Rear end, eastbound

No crash patterns that would benefit from lighting were identified.

## Percentage of Nighttime Crashes

Forty-three percent (3 out of 7) of the crashes at this site occurred during dark conditions. The crash history at this intersection meets the conditions for a location where lighting "should be installed," as per Section 2.3 of the DeIDOT Lighting Guidelines.

## Lighting Warrant Results

This site has greater than $40 \%$ of crashes occurring during dark conditions, therefore meeting part of the warrant for a site where roadway lighting should be installed. However, no crash patterns that would benefit from lighting were identified. Therefore, roadway lighting is not recommended at this site.

## Site \#2: Old Baltimore Pike @ College Drive (SR 896) (M.P. 2.45)

## Crash Patterns

The Crash Data Summary and Evaluation showed that there were 30 total crashes near this intersection during the three year evaluation period. Eleven (11) of these crashes occurred during dark conditions.

The manner of impact of the eleven (11) dark crashes was as follows:

- 5 Rear end (2 NB, $2 \mathrm{WB}, 1 \mathrm{~EB}$ )
- 3 Angle (2 NB/SB LT, NB RT/SB LT)
- 2 Ran off road (2 SB RT)
- 1 Sideswipe

An examination of the police crash reports for the five (5) rear end crashes showed that they occurred in three of the four approaches to the intersection. All three angle crashes involved northbound vehicles colliding with southbound left-turning vehicles. Both run off the road crashes involved southbound right-turning vehicles that lost control at the intersection.

## Percentage of Nighttime Crashes

Thirty-seven percent (11 out of 30 ) of the crashes that occurred at the site were during dark conditions according to the crash reports.

## Lighting Warrant Results

Because the intersection has existing lighting at the intersection, the crash history is skewed compared to an unlit intersection. Therefore, the crash history cannot be relied upon in this circumstance for use in lighting warrant analysis.

## Site \#4: Old Baltimore Pike @ Chapel Street/Sunset Lake Road (SR 72) Intersection (M.P. 3.3)

## Crash Patterns

The Crash Data Summary and Evaluation showed that there were 59 total crashes near this intersection during the three year evaluation period. Twenty-three (23) of these crashes occurred during dark conditions.

The manner of impact of the twenty-three (23) dark crashes was as follows:

- 11 Rear end (8 WB, $1 \mathrm{NB}, 1 \mathrm{~EB}, 1 \mathrm{SB}$ )
- 10 Angle
- 5 at Old Baltimore Pike @ SR 72
- 4 SB/NB left turn
- 1 WB/EB left turn

5 at Old Baltimore Pike @ Royal Farms Entrance/Church Access Points

- $3 \mathrm{WB} / E B$ left turn
- 1 WB/SB right turn
- $1 \mathrm{~EB} / \mathrm{NB}$ left turn
- 1 Sideswipe
- 1 Engine fire

The crash history shows a pattern of rear end crashes and angle crashes at the intersection, and the nearby access points for the Royal Farms gas station and the Church entrance. These crash patterns may benefit from the roadway lighting, which would improve visibility and therefore improve driver awareness.

## Percentage of Nighttime Crashes

Thirty-nine percent (23 out of 59) of the crashes that occurred at the site were during dark conditions. The crash history at this intersection meets the conditions for a location where lighting "may be installed," as per Section 2.3 of the DeIDOT Lighting Guidelines.

## Lighting Warrant Results

This site has a history of crash patterns that may benefit from lighting, and greater than $35 \%$ of crashes occurring during dark conditions, therefore meeting the warrant for a site where roadway lighting may be installed.

## Site \#5: Old Baltimore Pike @ Westover Woods Drive (M.P. 3.8)

## Crash Patterns

The Crash Data Summary and Evaluation showed that there were three (3) total crashes near this intersection during the three year evaluation period. Two (2) of these crashes occurred during dark conditions.

One of the dark crashes was involved a pedestrian that walked in front of an eastbound vehicle. The other dark crash was a rear end collision involving westbound vehicles.

## Percentage of Nighttime Crashes

Sixty-seven percent (2 out of 3) of the crashes that occurred at the site were during dark conditions. The crash history at this intersection meets the conditions for a location where lighting "should be installed," as per Section 2.3 of the DeIDOT Lighting Guidelines.

## Lighting Warrant Results

Although the percentage of dark crashes meets the minimum for warranting roadway lighting, there was no identifiable pattern of crashes that would benefit from lighting. The low number of crashes was a factor that was considered in this analysis. Therefore, roadway lighting is not warranted at this site.

## 5. RECOMMENDATIONS

Recommendations are included below, and recommended improvements are summarized in the following table.

## Site \#1: Old Baltimore Pike @ Godwin Drive / Winterview Way Intersection (M.P. 2.3)

## Roadway Lighting

The crash history did not show a pattern of crashes that would benefit from lighting the area. Therefore, roadway lighting is not recommended for this site.

## Site \#2: Old Baltimore Pike @ College Drive (SR 896) (M.P. 2.45)

## Roadway Lighting

The intersection has existing roadway lighting. The existing light pole layout is consistent with DeIDOT's recommended light pole layout for complex intersection lighting. Photometric calculations are recommended to determine if the existing lighting meets DeIDOT's standard lighting levels.

## Other Improvements

The traffic signal clearance intervals (EB/WB approaches=4 seconds, NB/SB approaches=5 seconds) were reviewed and found to be sufficient.

The leaning Yield sign on southbound approach should be reposted.
Site \#4: Old Baltimore Pike @ Chapel Street/Sunset Lake Road (SR 72) Intersection (M.P. 3.3)

## Ongoing Projects

At the time of this report, a separate HEP project at this site was recently submitted to DeIDOT Project Development. The HEP project included signing modifications at the intersection.

## Roadway Lighting

Because the intersection features luminaires that appear to only cover part of the intersection, photometric calculations are recommended for this site.

The intersection would be evaluated for complex intersection lighting as per Section 4.3.2 of the DeIDOT Lighting Design Guidelines. Complex intersection lighting typically includes two (2) lights on the approaches to the intersection, and one (1) luminaire after the intersection.

At a minimum, additional luminaires on the northeast, northwest and southwest corners of the intersection would improve lighting levels. Also, the lighting levels may benefit from increasing the wattage of the existing 250 Watts to 400 Watts.

Site \#5: Old Baltimore Pike @ Westover Woods Drive (M.P. 3.8)

## Roadway Lighting

The crash history did not show a pattern of crashes that would benefit from lighting the area. Additionally, the crash history was limited to only three crashes. Therefore, roadway lighting is not recommended for this site.

Recommended Improvements

| Site | Recommended Improvement |
| :---: | :--- |
| \#2. Old Baltimore Pike @ <br> College Dr Intersection <br> (MP 2.45) | Repost leaning Yield sign on southbound approach. <br>  <br> Photometric calculations are recommended to determine if the <br> existing lighting meets DelDOT's standard lighting levels. |
| \#4. Old Baltimore Pike @ <br> SR 72 Intersection (MP <br> 3.3) | Evaluate for complex intersection lighting as per Section 4.3.2 of the <br> DelDOT Lighting Design Guidelines. At a minimum, additional <br> luminaires on the northeast, northwest and southwest corners of the <br> intersection would improve lighting levels. Also, the lighting levels <br> may benefit from increasing the wattage of the existing 250 Watts to <br> 400 Watts. |

## APPENDIX C: Previous Study

1997 HSIP - Site DD Report

## 1997 HSIP - Site DD Task I Report

## INTRODUCTION

Site DD is a 0.69 mile corridor located south of Newark along Old Baltimore Pike (N336) from Old Cooches Bridge Road (N408) to 0.31 miles east of Delaware Route 72 (South Chapel Street/Sunset Lake Road). West of Delaware Route 72, Old Baltimore Pike is a two-lane, open-section roadway. East of Delaware Route 72, Old Baltimore Pike is a three lane, open-section roadway with a two-way center left-turn lane. Within the limits of the site, there is one signalized intersection at Delaware Route 72 and two unsignalized, T-intersections at Old Cooches Bridge Road and Dayette Mills Road. The posted speed limit on Old Baltimore Pike is 45 miles per hour east of Delaware Route 72 and decreases to 35 miles per hour west of Delaware Route 72. The average daily traffic volume is 12,200.

## ACCIDENT DATA SUMMARIES

A total of 41 accidents were reported during the three year study period. Twenty-two accidents occurred at the Delaware Route 72 intersection and eleven occurred at Old Cooches Bridge Road. Seventeen of the twenty-two accidents at Delaware Route 72 were rear end collisions, eleven of which occurred on westbound Old Baltimore Pike. Eight of the eleven accidents at Old Cooches Bridge Road occurred on wet pavement. Of the remaining eight accidents, seven occurred on wet or icy roadway and the other accident was created by driver error. The following is a categorical summary of the accident data:

TABLE 1

## Accident Data Summary

| Accident <br> Severity |  | Year |  | Collision Type |  | Surface |  | Lighting |  |
| :---: | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Fatal | 1 <br> $(2 \%)$ | 1993 | 11 <br> $(27 \%)$ | Rear End | 23 <br> $(56 \%)$ | Dry | 18 <br> $(44 \%)$ | Daylight | 28 <br> $(68 \%)$ |
| Injury | 13 <br> $(32 \%)$ | 1994 | 14 <br> $(34 \%)$ | Angle | 11 <br> $(27 \%)$ | Wet | 20 <br> $(49 \%)$ | Dark/Unlit | 8 <br> $(20 \%)$ |
| PDO | 27 <br> $(66 \%)$ | 1995 | 16 <br> $(39 \%)$ | Other | 6 <br> $(15 \%)$ | Icy | 3 <br> $(7 \%)$ | Dark/Lit | 2 <br> $(5 \%)$ |

|  | 41 |  | 41 |  | 41 |  | 41 |  | 41 |

| Primary Cause |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| Following too <br> Closely - 5 <br> $(12 \%)$ | Speed too <br> Fast - 1 <br> $(5 \%)$ | Careless <br> Driving - 12 <br> $(29 \%)$ | Driving Under <br> Influence - 4 <br> $(10 \%)$ | Inattentive - 9 <br> $(22 \%)$ |
| Fail to Yield <br> ROW - 5 | Pass STOP <br> Sign -1 | Other - 2 |  |  |
| $(12 \%)$ | $(5 \%)$ | (5\%) | $(5 \%)$ |  |

## FIELD OBSERVATIONS

- Drivers travel above the posted speed, based on trial runs to determine average running speed.
- Vehicles were observed using the center left turn lane east of Delaware Route 72 for U-turns and as an acceleration lane.
- The predominant flows during the morning peak hour are northbound on Delaware Route 72 and from westbound Old Baltimore Pike to northbound Delaware Route 72. The reverse occurs during the evening peak hour.
- During the morning peak hour, queued northbound Delaware Route 72 through vehicles block access to the left turn lane. The same occurs on the southbound approach during the evening peak hour.
- Westbound Old Baltimore Pike vehicles waiting to turn left onto Old Cooches Bridge Road block the through movement.
- Northbound Old Cooches Bridge Road left turns have a restricted sight distance looking east due to a bridge located just east of the intersection.
- The east and westbound Old Baltimore Pike approaches to Delaware Route 72 have very short green times and queues do not always clear.
- Pavement on Old Baltimore Pike west of Dayette Mills Road is in poor condition, especially on the westbound approach to Old Cooches Bridge Road.

## REMEDIAL IMPROVEMENTS

- Replace double yellow centerline and edgelines on Old Baltimore Pike from Dayette Mills Road to Old Cooches Bridge Road.
- Replace the W3-1a (STOP AHEAD) sign with the D3 (Street Name) sign for Old Baltimore Pike on northbound Dayette Mills Road.
- Install "Watch for Turning Vehicles" sign on westbound Old Baltimore Pike approaching Old Cooches Bridge Road.
- Install R2-1 (Speed Limit) sign on eastbound Old Baltimore Pike east of Delaware Route 896.
- Resurface the roadway on Old Baltimore Pike from Dayette Mills Road to west of Old Cooches Bridge Road.
- Replace leaning guardrail on eastbound Old Baltimore Pike east of Old Cooches Bridge Road.

The assumed accident reduction with these improvements is 20 percent of the 11 accidents at Old Cooches Bridge Road or 15 percent of the total 41 accidents.

## ADDITIONAL STUDIES

The committee recommended no further study.

## BENEFIT/COST SUMMARY

Equivalent Uniform Annual Benefit Equivalent Uniform Annual Cost Total Cost of Improvements Benefit/Cost Ratio
