# EVALUATION OF HIGH CRASH LOCATIONS (DARK CRITERIA) STUDY 

LOCATION \#8:
US 13 (Sussex Highway)
MILEPOST 3.10 to 5.29
November 2012

Prepared for:
Delaware Department of Transportation

Urban Engineers, Inc.

## EXECUTIVE SUMMARY

The purpose of this study was to evaluate locations with the highest ratios of crashes occurring during dark conditions throughout the state of Delaware. The study included reviewing crash history and existing conditions of the locations, identifying specific sites where crashes are occurring and providing recommendations to improve conditions.

The Hazard Elimination Program (HEP) site selection process was used to determine ten (10) locations statewide with a dark crashes Critical Ratio greater than one and ten (10) or more crashes occurring in the three year study period within a one-mile roadway segment. US 13 (Sussex Highway, Sussex Road 2), from Milepost 3.10 to 5.29, was determined to be one of the ten locations with the highest dark crashes Critical Ratios statewide.

Police crash reports were analyzed to identify high crash sites along US 13 (Sussex Highway, Sussex Road 2) from Milepost 3.10 to 5.29. Crash clusters were identified at the following three (3) sites:

- Site \#1: US 13 (Sussex Highway, Sussex Road 2) @ Mt. Zion Road / Waller Road (Sussex Road 480) Intersection (M.P. 3.40)
- Site \#2: US 13 (Sussex Highway, Sussex Road 2) @ Oneals Road / Bethel Concord Road (Sussex Road 485) Intersection (M.P. 4.10)
- Site \#3: US 13 (Sussex Highway, Sussex Road 2) @ Airport Road / Ockels Road (Sussex Road 488) Intersection (M.P. 4.90)

Existing roadway lighting is present at none of these sites.

Police crash reports were analyzed to identify high crash sites along US 13 from Milepost 3.10 to 5.29. The crash patterns at one (1) site, US 13 and Oneals Road / Bethel Concord Road (Sussex Road 485) intersection, garnered evaluation for potential nighttime safety improvements. A warrant analysis showed that this intersection did not meet the conditions for installation of roadway lighting.

## 1. INTRODUCTION

The purpose of this study was to evaluate locations with the highest ratios of crashes occurring during dark conditions throughout the state of Delaware. The study included reviewing crash history and existing conditions of the locations, identifying specific sites where crashes are occurring and providing recommendations to improve conditions.

The study included three parts:
Part 1: Location Selection - The Hazard Elimination Program (HEP) site selection process was used to determine ten (10) locations statewide with a dark crashes Critical Ratio greater than one and ten (10) or more crashes occurring in the three year study period within a one-mile roadway segment. Results from the location selection process were reviewed in coordination with DeIDOT. Corridors that were already part of an ongoing HSIP or HEP project were not included in this study. The Critical Ratio methodology was used in the location selection process. The list of statewide 1.0 mile corridors ranked by Critical Ratio is included in Appendix D.

Part 2: Evaluation - After the list of the top ten locations was approved by DelDOT, initial review was performed for each selected location. The evaluation included field visits to the sites; collecting information on existing roadway and traffic conditions; crash analysis; preliminary lighting evaluation; and this report. The report includes existing lighting analysis; concept lighting improvement alternatives; other signing, striping and signal recommendations in accordance with the Delaware Strategic Highway Safety Plan (SHSP), particularly related to dark crashes; potential design/implementation issues, and identification of the need for more detailed studies (Phase II studies).

Part 3: Coordination -When possible, DeIDOT-approved recommendations will be coordinated for inclusion into the construction of ongoing projects. (HEP, Pavement \& Rehabilitation, PD, etc.)

The location selection process resulted in a list of ten locations, including US 13 (Sussex Highway, Sussex Road 2) from milepost 3.10 to 5.29.

## Study Area Characteristics

The study area includes US 13 (Sussex Highway, Sussex Road 2) from milepost 3.10 to 5.29 . The study area is in Sussex County, Delaware. US 13 is a four-lane, divided principal arterial roadway throughout the study area.

In 2010, US 13 experienced an ADT of 22,223 vehicles in the study area.

Shoulders are present on both sides of the road in each direction throughout the project area. A study area map is provided in Figure 1.

## 2. CRASH DATA SUMMARY

This evaluation was based on crash data during the three year period from May 16, 2008 to May 16, 2011.

A total of 45 crashes occurred on US 13 (Sussex Highway, Sussex Road 2) from milepost 3.10 to 5.29 during the evaluation period.

Eighteen (18) crashes resulted in personal injuries, not including fatality crashes. Two (2) crashes resulted in fatalities. One of the fatal crashes occurred during daylight and the other occurred during dark.

Angle collisions were the most predominant type of impact, with 17 of the 45 crashes (36\%).
Of the 45 crashes, 24 of the crashes occurred during daylight ( $53 \%$ ). Twenty (20) of the crashes occurred during dark conditions (44\%). Nineteen (19) of the dark crashes occurred in dark-not lighted conditions (14\%). One (1) of the dark crashes occurred in dark-lighted conditions (2\%). One (1) of the crashes occurred in dusk condition (2\%).

The highest number of crashes (15) at an individual site occurred at the intersection of US 13 and Oneals Road / Bethel Concord Road.

Crashes were grouped together into sites based on their location along US 13.

## Site \#1: US 13 (Sussex Highway, Sussex Road 2) @ Mt. Zion Road / Waller Road (Sussex

 Road 480) Intersection (M.P. 3.40)There were 4 total crashes at the site during the evaluation period. One (1) of the 4 crashes ( $25 \%$ ) occurred during dark hours. This site does not have existing roadway lighting.

This site was not selected for evaluation based on the limited crash history during dark hours.
Site \#2: US 13 (Sussex Highway, Sussex Road 2) @ Oneals Road / Bethel Concord Road (Sussex Road 485) Intersection (M.P. 4.10)

There were 15 total crashes at the site during the evaluation period. Five (5) of the 15 crashes ( $33 \%$ ) occurred during dark hours. There was one fatal crash during dark conditions at this intersection. This site does not have existing roadway lighting. Appendix B shows the crash diagram for this intersection.

This site was selected for evaluation based on the combination of the crash history and a lack of lighting at the intersection.

Site \#3: US 13 (Sussex Highway, Sussex Road 2) @ Airport Road / Ockels Road (Sussex Road 488) Intersection (M.P. 4.90)

There were 8 total crashes at the site during the evaluation period. One (1) of the 8 crashes (13\%) occurred during dark hours. This site does not have existing roadway lighting.

This site was not selected for evaluation based on the limited crash history during dark hours.

## 3. SITE CHARACTERISTICS

Site \#2: US 13 (Sussex Highway, Sussex Road 2) @ Oneals Road / Bethel Concord Road (Sussex Road 485) Intersection (M.P. 4.10)

US 13 (Sussex Highway, Sussex Road 2) and Oneals Road / Bethel Concord Road (Sussex Road 485) meet at an unsignalized intersection at milepost 4.10 of US 13.

US 13 northbound has two through lanes, a left turn lane and a right turn lane. A painted channelized island is present for the northbound right turn lane. US 13 southbound has two through lanes, a left turn lane and a right turn lane. A raised channelized island is present for the southbound left turn lane. Oneals Road eastbound has a shared left/through/right turn lane. A raised channelized island is present for the eastbound right turn movement. Bethel Concord Road westbound has a shared left/through/right turn lane. A raised channelized island is present for the westbound right turn movement. An aerial showing the intersection layout is shown in Photo 1.

There are no pedestrian crosswalks present at the intersection. The posted speed limit for US 13 northbound and US 13 southbound is 55 miles per hour, the posted speed limit for eastbound Oneals Road is 40 miles per hour, and the posted speed limit for westbound Bethel Concord Road is 35 miles per hour.

## Existing Lighting

There is no existing roadway lighting at this intersection.

Photo 1: US 13 @ Oneals Road / Bethel Concord Road Intersection

## 4. LIGHTING WARRANT EVALUATION

The DeIDOT Lighting Guidelines contain the conditions for determining if lighting is warranted at a given site. A warrant analysis is included below for the site that was selected for evaluation.

Site \#2: US 13 (Sussex Highway, Sussex Road 2) @ Oneals Road / Bethel Concord Road (Sussex Road 485) Intersection (M.P. 4.10)

Section 2.3, Lighting Warrants, of the DeIDOT Lighting Guidelines states that lighting may be installed at "locations where crash patterns indicate that lighting may reduce crashes and where the percentage of nighttime accidents is 35 percent or greater."

## Crash Patterns

The Crash Data Summary and Evaluation showed that there were 15 total crashes near this intersection during the three year evaluation period. Five (5) of these crashes occurred during dark conditions.

The manner of impact of the five (5) dark crashes was as follows:

- 4 Angle
- 1 Run off the road

An examination of the police crash reports showed a predominant number of angle crashes. Of the four (4) angle crashes, three (3) involved the vehicles traveling on the westbound approach to the intersection and one (1) of them was a fatal crash. The last one (1) of the four crashes was run off the road type.

## Percentage of Nighttime Crashes

Thirty-three percent (5 out of 15) of the crashes at the site occurred at the site were during dark conditions.

## Lighting Warrant Results

This site has less than $35 \%$ of crashes occurring during dark conditions, therefore it does not meet part of the lighting warrant for a site where roadway lighting may be installed.

## 5. PREVIOUS STUDY RECOMMENDATIONS

A previous study was included in a review of previously recommended improvements at the sites.

2004 HSIP - Site DD Report included the following recommendations:

| IMPLEMENTED | Install a stop line and a double yellow centerline on the eastbound <br> Oneals Road approach to US 13. |
| :---: | :--- |
| IMPLEMENTED | Install a stop line and extend the double yellow centerline on the <br> westbound Bethel-Concord Road approach to US 13. |
| IMPLEMENTED | Replace the faded "STOP AHEAD" (W3-1a) and the Advance Street <br> Name Plaque (W16-8) located on westbound Bethel-Concord Road <br> approaching US 13. |
| IMPLEMENTED | Trim the tree branch on westbound Bethel-Concord Road obstructing the <br> "Stop Ahead" sign. |
| IMPLEMENTED | Replace the "Cross road" (W2-2) signs and Advance Street Name <br> Plaques on northbound and southbound US 13 approaching Bethel- <br> Concord Road with "Cross Road" signs illustrating the skew of the <br> intersection along with Advance Street Name Plaques that display the <br> street name. |
| IMPLEMENTED | Replace the Bethel-concord Road Road Street Name blade located on <br> the northeast corner of the US 13/Oneals Road/Bethel-Concord Road <br> intersection. |

## 6. RECOMMENDATIONS

Site \#2: US 13 (Sussex Highway, Sussex Road 2) @ Oneals Road / Bethel Concord Road (Sussex Road 485) Intersection (M.P. 4.10)

## Roadway Lighting

There is no existing roadway lighting at this intersection. The crash history at US 13 @ Oneals Road / Bethel Concord Road does not meet DeIDOT's conditions for an intersection where lighting may be warranted.

No recommendations are included for this intersection.

## Ongoing Projects

Improvements at this intersection have been proposed as part of the US 13 Seaford Intersection Improvements project. Proposed improvements include removal of the northbound left-turn movement and conversion of the side streets to right-out only.

## Recommended Improvements

| Site | Recommended Improvement |
| :---: | :--- |
|  | No recommendations were included |

## APPENDIX B: Crash Diagram

Site \#2: US 13 (Sussex Highway, Sussex Road 2) @ Oneals Road / Bethel Concord Road (Sussex Road 485) Intersection (M.P. 4.10)

## APPENDIX C: Previous Study

2004 HSIP - Site DD Report

## 2004 Highway Safety Improvement Program - SITE DD S2 (US 13) - MP 3.6-4.49 <br> From 0.23 miles north of Road 480 to 0.34 miles north of Road 485A

## INTRODUCTION

Site DD is a 0.89-mile corridor located south of Seaford along U.S. 13 from 0.23-miles north of Road 480/Mount Zion Road/Friendship Hill Road to 0.34 miles north of Road 485A/Easter Hill Road. US 13 is a four-lane, divided, open-section roadway with shoulders. The posted speed limit is 55 miles per hour throughout the corridor. The ADT is approximately 26,500. Within the limits of the site, there is one unsignalized intersection at Bethel-Concord Road/Oneals Road/Road 485.

Other Relevant Projects: U.S. 13 within the limits of the site is included in the Corridor Capacity Preservation Program. This Program seeks to preserve capacity along U.S. 13 and reduce the number of traffic signals and intersections that slow through traffic. No specific improvements are proposed within the limits of the HSIP site.

## ACCIDENT DATA SUMMARIES

A total of 26 accidents were reported during the three-year study period between January 2000 and December 2002 including 13 ( 50 percent) angle accidents and 6 ( 23 percent) rear end accidents. Of the six rear end accidents, two involved vehicles stopped behind a school bus. Seventeen (65\%) of the accidents occurred at the US 13 at Concord Road intersection. Many of the angle accidents involved westbound motorists who did not stop in the median prior to crossing U.S. 13 and were then struck by southbound through vehicles, but the motorist's intended direction is unclear due to the divided highway. The following is a summary of the accidents by location and type:

- US 13/Bethel-Concord Road - 17 accidents
o 5 southbound/westbound angle accidents (one fatality)
04 southbound rear end accidents
o 2 northbound/eastbound angle accident
o 2 northbound left-turn accidents
o 1 southbound/eastbound angle accident
o 1 northbound/westbound angle accident
o 1 southbound left-turn accident
o 1 eastbound right-turn/southbound angle accident
A categorical summary of the accidents by type, severity, surface condition, lighting condition, year, and primary cause is shown in Table 1.

## FIELD OBSERVATIONS

## U.S. 13/Oneals Road/Bethel-Concord Road

- Oneals Road/Bethel-Concord Road intersects U.S. 13 at a skew. This intersection operates under stop control on the eastbound and westbound approaches. Both the eastbound and the westbound Oneals Road/Bethel-Concord Road approaches have channelized right-turns and a shared left-turn/through lane. Southbound left-turning vehicles are channelized by a concrete island.
- YIELD signs are located in the median opening for westbound traffic and northbound and southbound left-turning traffic. The median can only accommodate a single eastbound or westbound vehicle in each direction at one time. For example, if several westbound vehicles try to squeeze into the median together to reduce the delay at Bethel-Concord Road but then the rear vehicle juts into northbound traffic.

- The "STOP AHEAD" warning sign located on the westbound approach to U.S. 13 is faded and obstructed by tree branches.
- The Bethel-Concord Road Street Name blade on the northeast corner of the intersection is damaged.
- Westbound motorists were observed looking far over their right shoulder while waiting in the median opening to locate an adequate gap on southbound U.S. 13. Several motorists were observed completing either a through or left-turn movement without stopping.
- While the Ford dealership on the southeast corner may provide some ambient light, there is no street lighting provided along the U.S. 13 corridor.
- During the AM peak, heavy volumes exiting the Easter Hill Road intersection located just north of the Oneals Road intersection may have delayed eastbound and westbound vehicles at the Oneals Road/Bethel-Concord Road intersection. Aggressive drivers at the southern intersection who have been delayed may not wait for an appropriate gap in traffic creating a potential safety problem.
- Eastbound and westbound Oneals Road/Bethel-Concord Road queues were minimal during peak hours.
- Eastbound and westbound right turns operate under "Stop" control.

## REMEDIAL IMPROVEMENTS

- Install a stop line and a double yellow centerline on the eastbound Oneals Road approach to U.S. 13.
- Install a stop line and extend the double yellow centerline on the westbound Bethel-Concord Road approach to U.S. 13.
- Replace the faded "STOP AHEAD" (W3-1a) and the Advance Street Name Plaque (W16-8) located on westbound Bethel-Concord Road approaching U.S. 13.
- Trim the tree branch on westbound Bethel-Concord Road obstructing the "Stop Ahead" sign.
- Replace the "Cross Road" (W2-2) signs and Advance Street Name Plaques on northbound and southbound U.S. 13 approaching Bethel-Concord Road with "Cross Road" signs illustrating the skew of the intersection along with Advance Street Names Plaques that display the street name.
- Replace the Bethel-Concord Road Street Name blade located on the northeast corner of the U.S. 13/Oneals Road/Bethel-Concord Road intersection.

## TASK IA STUDIES

The HSIP committee recommends performing turning movement counts and conflict analyses at the U.S. 13 at Oneals Road/Bethel-Concord Road intersection to determine the need for and impacts associated with intersection channelization to prohibit specific turning movements and reduce conflict points at the intersection.

## TOTAL COST OF REMEDIAL IMPROVEMENTS - \$1000
