

## Acknowledgments

---

---

Completion of this complex project required the teamwork of many individuals and organizations, of whom only the main ones are acknowledged here.

Kevin Cunningham of the Office of Planning, Delaware Department of Transportation, was the project manager and provided invaluable support and enthusiasm, constantly encouraging us to think “outside the box”. Gwen Davis of the State Historic Preservation Office was tremendously helpful in steering the project through its regulatory maze. She also managed a site visit despite a badly sprained ankle.

Andy Miller and Harry Cooper of Delaware Department of Transportation provided much assistance in enabling us to perform the work safely on this busy and narrow stretch of highway, while at the same time causing minimal disruption to traffic. Earthmoving services were provided by Steve Augustewicz, and safety services and flaggers were provided by Enterprise Flasher and DW Technologies.

The indefatigable Ned Heite worried away at the complex local history of the mills and the farm, and deployed his encyclopedic knowledge of Delaware’s industrial history to present a contextual overview that can be applied to future projects.

Background research for the project was primarily undertaken by Heite consulting, with assistance from Damon Tvaryanas and Susan Ferenbach. The fieldwork team was led by Bill Liebeknecht, assisted by Sue Ferenbach (Springer/Little Farm) and Vincent Maresca (Mill site). The team included George Cress, Sue Eidson, Gregg Tyndall, Jason Uebelacker and Rebecca White. The artifact analysis team included Sue Ferenbach, Christy Morganstein and Michael Murphy. The report was primarily written by Ian Burrow, Sue Ferenbach, Vincent Maresca and Ned Heite. Report production was overseen by Christine Francis and Debra Gitterman, with graphics by Cathy Smyrski, Dawn Turner, Paul Jung and Vincent Maresca.
