The KMZ (zips of KML) files are for use in [Google Earth](#). They are representative of the tabular data in the PDF files used to prepare the Traffic Summary pdf files further down this page.

For best use, double click on each file individually. Google Earth will open each from the Temporary Files at the bottom of the Places section. Click and grab the TOP LINE 2008AADT(_x_D) kml file and drag it up to My Places.

When using these file, it is best to UNCHECK both the Feature Labels (AAD) and Information Points as they clutter up the screen.

With All six sections of 2008AADT(2D) checked ON, a color coded GE layer is presented. Place hand cursor over roadway of interest until it becomes an arrow. Right click to display AADT data for that road segment.

Enable, as few, or as many 2008AADT(3D) segments to see a 3D representation of 2008 AADT's for the Delaware network. This graphical data is presented in feet above ground=AADT.
