

MEMORANDUM

81 Mosher Street
Baltimore, MD 21217
Phone 410.728.2900
Fax 410.383.3270

Date: February 14, 2012
To: Mark Tudor, DelDOT
CC: James Burnett, RK&K
Tony Chan, RK&K
From: Nancy Bergeron, RK&K
Amy Jackson, RK&K
Subject: Churchmans Crossing Traffic Monitoring
Fall 2011 Counts

This memo summarizes the latest updates to the Churchmans Crossing traffic monitoring program. Traffic data for the study was collected during October and November 2011. This represents the thirteenth time the intersections have been counted since the annual traffic monitoring program began in 2000. Nine different intersections have been studied each year between 2005-2010. The same nine intersections were studied again in 2011.

The nine intersections studied in 2011 are listed below. The number in parentheses behind the intersection name is the identification number that the intersection has been referenced by in previous years, and corresponds with the numbered list of intersections in the attached Traffic Summary.

- SR 2 / Harmony Road (1)
- SR 7 / SR 4 (Stanton Split) (4)
- SR 4 / SR 7 / J.P. Morgan (5)
- SR 4 / Harmony Road (8)
- SR 273 / Harmony Road (14)
- SR 273 / Chapman Road / Eagle Run Road (15)
- SR 273 / Old Baltimore Pike (16)
- SR 7 / SR 273 (17)
- SR 2 / Red Mill Road / Polly Drummond Hill Road (22)

This update also includes changes to the programs and software packages used to provide intersection LOS and delay results. Over the past decade, these software packages have undergone several upgrades and RK&K has been instructed to use the most current edition for each traffic monitoring update. Previously, Highway Capacity Software HCS+ 5.5 and SYNCHRO Version 7 (Build 773, Rev 8) were used. For this update, the newest version of SYNCHRO Version 8 was used. The same version of HCS+ 5.5 software was used in this report.

Key Findings from 2011 CLV Analysis

- In 2011, three intersections operated at a *better* level of service in the AM peak than in 2010, and four intersections operated at a *better* level of service in the PM peak.
- In 2011, two intersections operated at a *worse* level of service in the AM peak than in 2010, and zero intersections operated at a worse level of service in the PM peak.
- The most significant change in level of service from 2010 to 2011 was observed at the SR 273 / Harmony Road intersection where, during the PM peak, the level of service *improved* from LOS F to LOS E.

One factor that may have affected the Churchman's Crossing analyses results are the intersection modifications at SR 273 and Harmony Road which were completed before the 2011 traffic counts were performed. The improvements included the lengthening of the westbound left-turn lane and the conversion of eastbound and westbound left-turn phasing on SR 273 from permitted-protected to protected only, recommended by a study of the crash history at this intersection.

Additionally, the SR 2 at Harmony Road intersection has also undergone a minor geometric change along with a signal phasing change between the 2010 and 2011 traffic counts; the westbound left turn lane storage length was increased from 550 feet to 1,400 feet to accommodate longer queues associated with a left turn phasing change. Specifically, the eastbound and westbound left turn phasing on SR 2 has become a protected only left-turn instead of a permitted-protected left-turn, as a result of safety concerns related to left turn crashes at this intersection.

AM Peak Summary

Attached to this memo are turning movement count data tables for each intersection with the respective Level of Service (LOS) and volume to capacity ratio computed using the Critical Lane Volume (CLV) analysis method; also included are intersection LOS and the corresponding delay in seconds computed using HCS+ and SYNCHRO Version 8. A comparison between the AM peak hour Levels of Service (LOS) computed using the three analysis methods for the 2010 and 2011 counts indicate that:

- One (1) intersection operated at the same LOS as the previous year for all analysis methods:
 - SR 4 / SR 7 / J.P. Morgan (5)
- Four (4) intersections operated at an improved LOS for at least one analysis methods:
 - SR 4 / Harmony Road (8)
 - SR 273 / Old Baltimore Pike (16)
 - SR 7 / SR 273 (17)
 - SR 2 / Red Mill Road / Polly Drummond Hill Road (22)
- Four (4) intersections operated at a worse LOS for at least one analysis method:
 - SR 2 / Harmony Road (1)
 - SR 7 / SR 4 (Stanton Split) (4)
 - SR 273 / Harmony Road (14)
 - SR 273 / Chapman Road / Eagle Run Road (15)

Table 1 shows the Level of Service (LOS) for the Fall 2011 counts for each of the eight (8) intersections that experienced a change in LOS during the AM peak; the change from 2010 to 2011 is also shown. The results in Table 1 indicate some slight variation in the level of service calculated using each of the three methods. These slight differences are reasonably expected when comparing multiple analysis methods due to the different approaches and assumptions about capacity found in these methods. The trends and comparisons with prior counts that follow are based primarily on the CLV results:

Traffic trends during the AM peak on SR 2 varied on the corridor. While SR 2 eastbound and westbound thru traffic at Polly Drummond Hill/Red Mill Road decreased compared to 2010, resulting in an improvement in level of service (from LOS E to LOS D), SR 2 traffic levels were relatively consistent at Harmony Road, where the LOS was unchanged from 2010 according to the CLV analysis. The LOS decreased at this location, however, according to results from the HCS and Synchro analyses (LOS B to LOS D). This could be a result of the signal phasing change that took place in the Fall of 2011, which converted the eastbound and westbound left-turn phasing to protected only. This reduced the effective green time for northbound traffic, decreasing the approach LOS, and ultimately decreasing the intersection LOS.

Similar variations in traffic trends in the AM peak were observed on the SR 4/SR 7 corridor. AM peak hour traffic decreased for a majority of turning movements at the intersection of SR 4 at Harmony Rd, resulting in an improvement in level of service (from LOS F to LOS E), while traffic levels increased at SR 4/SR 7 Stanton Split, resulting in a decline of level of service (from LOS C to LOS D). Traffic was nearly unchanged at the intersection of SR 7/SR 4 J.P. Morgan, where no change in level of service (LOS A) was reported.

Traffic trends varied along SR 273, where two out of the four intersections on the corridor reported changes in level of service. AM peak hour traffic increased at the intersection of SR 273 and Chapman Road/Eagle Run Road, resulting in a decline in level of service (from LOS D to LOS E), while traffic levels at SR 273/SR 7 decreased, resulting in an improvement in level of service (from LOS D to LOS C). No change in level of service from 2010 to 2011 was reported at the SR 273 intersections with Harmony Road (LOS E) or Old Baltimore Pike (LOS D).

Table 1
AM Peak Hour
Intersection Level of Service (LOS) Comparison
For All Intersections Experiencing a Change in AM Peak LOS

	Fall 2011 LOS (Change in LOS from 2010 to 2011)		
	CLV	HCS	SYNCHRO

SR 2 / Red Mill Road / Polly Drummond Hill Road (22)	D (+)	D (+)	D (+)

(-) No change in LOS (+) Improved by 1 LOS (-) Declined by 1 LOS

PM Peak Summary

A comparison between the PM peak hour Levels of Service (LOS) for the Fall 2010 and Fall 2011 counts indicates that:

- One (1) intersection operated at the same LOS as the previous year for all analysis methods:
 - SR 7 / SR 4 (Stanton Split) (4)
- Six (6) intersection operated at a better LOS for one analysis method:
 - SR 4 / SR 7 / J.P. Morgan (5)
 - SR 4 / Harmony Road (8)
 - SR 273 / Harmony Road (14)
 - SR 273 / Old Baltimore Pike (16)
 - SR 7 / SR 273 (17)
 - SR 2 / Red Mill Road / Polly Drummond Hill Road (22)
- Two (2) intersection operated at a worse LOS for at least one analysis method:
 - SR 2 / Harmony Road (1)
 - SR 273 / Chapman Road / Eagle Run Road (15)

Table 2 shows the Level of Service (LOS) computed by each analysis method for the Fall 2011 counts for the eight (8) intersections that experienced a change in LOS during the PM peak; the change in LOS from 2010 to 2011 is also shown. The following trends and comparisons with prior counts are based primarily on the CLV results:

PM peak traffic trends during the PM peak on SR 2 indicated minimal changes compared to 2010, resulting in no changes to levels of service at the intersections of SR 2 at Red Mill Road/Polly Drummond Hill Road (LOS E) and SR 2 at Harmony Road (LOS D).

Variations in PM peak trends indicated a decrease in traffic at the intersection of SR 4/SR 7 at J.P. Morgan, resulting in an improvement in the level of service (from LOS E to LOS D). No change in level of service from Fall 2010 to Fall 2011 was reported at the SR 4/SR 7 intersections with Harmony Road (LOS E) or at the Stanton Split (LOS F).

Traffic trends varied along SR 273, where three out of the four intersections on the corridor reported improvements in level of service. At the intersection of SR 273 and Harmony Road, through traffic on westbound and eastbound SR 273 decreased compared to 2010 levels, resulting in an improvement in level of service from LOS F to LOS E. At the intersections of SR 273/Old Baltimore Pike and SR 7/SR 273, decreased levels of traffic on the mainline approaches and cross-streets contributed to an improvement in level of service (both from LOS D to LOS C). SR 273 traffic levels were relatively consistent at Chapman Road/Eagle Run Road where level of service was unchanged from 2010 (LOS E).

Table 2 PM Peak Hour Intersection Level of Service (LOS) Comparison For All Intersections Experiencing a Change in PM Peak LOS

Fall 2011 Traffic Summary

NOTE: LOS comparisons based on Critical Lane Volume (CLV) analyses

1. SR 2 / Harmony Road

In fall 2011, the SR 2 / Harmony Road intersection was partially reconstructed to increase the westbound left-turn lane storage length from 550 feet to 1,400 feet. The eastbound and westbound left-turn signal phasing on SR 2 was also converted to protected only due to the left-turn crash history at this location. These changes were completed before the October 2011 traffic counts.

AM: Even with the modifications described above, the level of service remains unchanged at LOS C ($V/C = 0.72$ to 0.73). The intersection has operated at LOS C or D for the past 12 years. Left-turning and right-turning northbound traffic from Harmony Road decreased 4% and 11%, respectively, resulting in an overall 9% decrease (-60 vehicles) for the approach during the AM peak hour. Overall, approach volumes on eastbound and westbound SR 2 are generally consistent with 2010 volumes.

PM: Similarly, even with the modifications described above, the level of service remained constant at LOS D ($V/C = 0.85$ to 0.84). This intersection has operated at LOS D or E for the duration of this traffic monitoring program. Left-turning and right-turning northbound traffic from Harmony Road decreased 3% and 15%, respectively, resulting in an overall 11% decrease (-138 vehicles) for the approach. Eastbound right-turning traffic from SR 2 increased 13% (+37 vehicles). Overall, traffic volumes on the eastbound and westbound approaches are generally consistent with 2010 volumes.

4. SR 7 / SR 4 (Stanton Split)

AM: Level of service worsened from LOS C ($V/C = 0.79$) to LOS D ($V/C = 0.81$). This intersection has operated at LOS C or D for the duration of this traffic monitoring program. Southbound left-turning traffic from SR 7 increased 13% (+40 vehicles). Westbound through traffic from SR 4 increased 10% (+78 vehicles). Eastbound traffic from SR 4/SR 7 and westbound right-turning traffic remained relatively constant.

PM: Level of service remained constant at LOS F ($V/C = 1.09$ to 1.08) marking the sixth year the intersection has been reported to operate at LOS F since 2000. Traffic during the PM peak hour on the westbound approach from SR 4 increased 18% (+254 vehicles). Traffic on the eastbound approach from SR 4/SR 7 decreased 11% (-306 vehicles). Traffic on the southbound SR 7 approach remained relatively unchanged.

5. SR 4 / SR 7 / J.P. Morgan

AM: Level of service remained constant at LOS A ($V/C = 0.58$). Except for in 2003 (LOS D), this intersection has operated at LOS C or better during this traffic monitoring program. Southbound left-turning vehicles from SR 7 increased 12% (+22 vehicles) while eastbound left-turning vehicles from SR 4 decreased 12% (-40 vehicles). However, overall, traffic on all intersection approaches remained relatively constant, fluctuating between 0-3% from 2010 volumes.

PM: Level of service improved from LOS E ($V/C = 0.92$) to LOS D ($V/C = 0.83$). The intersection has operated at LOS D or E for the past seven years. Overall, traffic decreased for all approaches, with a significant PM peak hour decrease for the westbound approach from J.P. Morgan (14%, -83 vehicles). Northbound left-turning traffic from SR 7 decreased 26% (-43 vehicles) and southbound through traffic decreased 9% (-182 vehicles).

8. SR 4 / Harmony Road

AM: Level of service improved from LOS F ($V/C = 1.01$) to LOS E ($V/C = 0.95$). Except for in 2010 (LOS F), the intersection has operated at LOS D or E since 2000. Northbound left-turning traffic from Harmony Road increased 25% (+29 vehicles) while the northbound right-turning traffic decreased 28% (-125 vehicles). Southbound through traffic on Harmony Road decreased 24% (-102 vehicles) while southbound right-turning traffic increased 68% (+57 vehicles). The eastbound and westbound approaches on SR 4 decreased 8% (-113 vehicles) and 5% (-43 vehicles), respectively.

PM: Level of service remained unchanged at LOS E ($V/C = 0.97$ to 0.92). The intersection has operated at LOS D or E during the entire traffic monitoring program. Overall, traffic for the southbound approach on Harmony Road decreased 14% (-140 vehicles). Westbound left-turning traffic from SR 4 increased 11% (-26 vehicles). Overall, traffic volumes on the eastbound and northbound approaches are generally consistent with 2010 volumes.

14. SR 273 / Harmony Road

In fall 2011, the eastbound and westbound SR 273 left-turn signal phasing was converted from a permitted-protected to protected only as a result of safety concerns related to left-turn crashes at this intersection. The westbound left-turn lane on SR 273 was also lengthened during this time.

AM: Even with the modifications described above, the level of service remained unchanged at LOS E ($V/C = 0.91$ to 0.92). The intersection has operated at LOS D or E for the past seven years. Overall, traffic from the northbound approach of Gerald Drive and the southbound approach of Harmony Road increased 38% (+35 vehicles) and 11% (+52 vehicles), respectively. Through traffic on the eastbound approach of SR 273 decreased 11% (-219 vehicles) while through traffic on the westbound approach of SR 273 increased 8% (+139 vehicles).

PM: Level of service improved from LOS F ($V/C = 1.09$) to LOS E ($V/C = 0.93$). The intersection has operated at LOS E or F for 11 of the 13 years of the traffic monitoring program. Overall, traffic decreased for all approaches, with a significant PM peak hour decrease for the eastbound (19%, -38 vehicles) and westbound approaches on SR 273 (6%, -163 vehicles). The LOS improvement in the PM peak is a result of both the lower volumes on SR 273 and the intersection modifications that were completed in Fall 2011.

15. SR 273 / Chapman Road / Eagle Run Road

AM: Level of service worsened from LOS D ($V/C = 0.88$) to LOS E ($V/C = 0.98$). The intersection has operated at LOS D or E for the entire duration of the traffic monitoring program. Overall, traffic from the westbound direction of SR 273 increased 9% (+180 vehicles). Northbound through and right-turning traffic from Chapman Road increased 86% (+25 vehicles) and 22% (+25 vehicles), respectively. Southbound left-turning traffic from Eagle Run Road decreased 65% (-40 vehicles). On SR 273, AM peak hour traffic volumes from the eastbound direction were relatively unchanged from 2010 levels.

PM: Level of service remained constant at LOS E ($V/C = 0.94$ to 0.98). The intersection has operated at LOS D or E for the past five years. Traffic increased on the northbound (10%, +111 vehicles) and westbound (13%, +187 vehicles) approaches, while traffic on the eastbound SR 273 and southbound Eagle Run Road approaches remained relatively unchanged from 2010 levels.

16. SR 273 / Old Baltimore Pike

AM: Level of service remained constant at LOS D ($V/C = 0.85$ to 0.84). The intersection has operated at LOS D for eight of the past ten years. Traffic decreased significantly on the northbound direction (20%, -323 vehicles) while traffic increased on the eastbound approach (9%, +81 vehicles). Overall, traffic on the southbound approach from Old Baltimore Pike and the eastbound approach from SR 273 remained relatively unchanged from 2010 volumes.

PM: Level of service improved from LOS D ($V/C = 0.89$) to LOS C ($V/C = 0.81$), marking the third year the intersection has reported to operate at LOS C since 2000. Eastbound and westbound SR 273 left-turning traffic increased 44% (+43 vehicles) and 11% (+34 vehicles), respectively. The southbound approach of Old Baltimore Pike experienced an 8% increase (+28 vehicles). Traffic on the northbound approach of Old Baltimore Pike remained relatively constant.

17. SR 273 / SR 7

AM: Level of service improved from LOS D ($V/C = 0.87$) to LOS C ($V/C = 0.81$), marking the third year the intersection has reported to operate at LOS C since 2000. Traffic in the southbound direction on SR 7 experienced a significant increase by 97% (+63 vehicles). Northbound right-turning vehicles from SR 7 decreased 15% (-141 vehicles). Overall, traffic on the eastbound and westbound approaches on SR 273 remained relatively constant.

PM: Level of service improved from LOS D ($V/C = 0.82$) to LOS C ($V/C = 0.79$), marking the third year the intersection has reported to operate at LOS C since 2000. Westbound left-turning traffic from SR 273 decreased 19% (-152 vehicles) and westbound right-turning traffic decreased 17% (-22 vehicles). Overall, traffic on the southbound approach of SR 7 increased 10% (+25 vehicles). Traffic on the eastbound approach from SR 7 increased 8% (+134 vehicles). Traffic on the northbound approach of SR 7 remained relatively unchanged from 2010 volumes.

22. SR 2 / Red Mill Road / Polly Drummond Hill Road

AM: Level of service improved from LOS E ($V/C = 0.97$) to LOS D ($V/C = 0.83$). The intersection has now operated at LOS D or better for five of the past seven years. Traffic decreased significantly on the northbound and eastbound approaches to the intersection which experienced decreases of 16% (-134 vehicles) and 19% (-368 vehicles), respectively. The westbound SR2 approach experienced a less significant decrease of 8% (-83 vehicles), while the overall traffic on the southbound Polly Drummond Hill Road approach remained relatively consistent with 2010 volumes.

PM: Level of service remained the same at LOS E ($V/C = 0.99$ to 0.94). The intersection has operated at LOS E or F for the past seven years. Traffic on the eastbound SR 2 approach decreased 10% (-206 vehicles) and the northbound Red Mill Road approach decreased 11% (-81 vehicles). Traffic on the southbound and westbound approaches was relatively unchanged.

**Churchmans Crossing Volume and
Level of Service Comparison - AM Peak Hour**

February 2012

NOTE:

Volumes shown in the following table represent the peak hour volumes at each intersection (e.g., they are not the peak volumes of an entire corridor). Therefore, the peak hours may vary among intersections, even between adjacent intersections. For example, the peak hour at SR 2 / Harmony Road was found to occur between 4:30 and 5:30 PM. However, the nearby intersection at SR 4 / Harmony Road was found to occur between 4:45 and 5:45 PM. As a result, the volumes in the following table may not balance between intersections.

Before 10/04, an excessive two right turn lane was added. The intersection was converted in 10/04. In 2010, the northbound lane configuration was converted to a shared left-through lane and a right-turn only lane. In 2011, the eastbound and westbound left-turn lanes were converted to protected only, and the westbound left-turn lane was eliminated.

Intersection was not counted in Fall 2005.

Churchmans Crossing Volume and Level of Service Comparison - PM Peak Hour

NOTE:

Volumes shown in the following table represent the peak hour volumes at each intersection (e.g., they are not the peak volumes of an entire corridor). Therefore, the peak hours may vary among intersections, even between adjacent intersections. For example, the peak hour at SR 2 / Harmony Road was found to occur between 4:30 and 5:30 PM. However, the nearby intersection at SR 4 / Harmony Road was found to occur between 4:45 and 5:45 PM. As a result, the volumes in the following table may not balance between intersections.

Before 7/02, an exclusive WB right turn lane was added. No count performed in 2004 due to ongoing construction at I-95 / SR 273 interchange. Intersection was converted to a shared left-through northbound lane configuration. In 2010, the eastbound and westbound lane and a right-turn only lane. In 2011, the eastbound and westbound left-turn signal phasing was converted from permitted-protected to
