

TRUCK WEIGHTS

Truck traffic was monitored for axle-weight measurements in 2004 at 23 WIM sites. These sites have not been calibrated since late 2003; however, calibration is scheduled to be completed again in 2005. Truck weight data is available by request from OIT and will be reported to Pavement Management.

OTHER TRAFFIC MONITORING ACTIVITIES

Not included in this report are the numerous site-specific traffic counts conducted on demand during 2004. The Division of Planning currently has a subcontractor who is equipped to perform turning movements counts, through traffic counts, and vehicle classification counts at any location on the DelDOT highway network. Currently, work is in progress to develop a central database where all of this information can be easily accessed, stored and maintained.
